Dear Hiring Manager,

I am excited to apply for the Backend Engineer Intern position at HoYoverse. As a second-year Computer Science student at the National University of Singapore (NUS) with hands-on experience in full-stack web development and a passion for the immersive worlds HoYoverse creates.

During a previous summer project, I co-developed a full-stack web application in a two-person team, focusing primarily on backend development. I implemented APIs, integrated a Firebase database, and handled server-side logic to ensure seamless user interactions. Remarkably, I learned ReactJS and Node.js within just two weeks, showcasing my ability to adapt quickly to new technologies and deliver results under tight timelines. Additionally, I collaborated in a team of five on a Java-based address book application designed for therapists during my coursework.

Beyond development, I have experience as a student tutor for Java at NUS, where I reinforced my understanding of programming concepts by teaching object-oriented principles to peers. These experiences have strengthened my proficiency in Java while also building my teamwork and communication skills.

As a passionate three-year player of Genshin Impact, I deeply admire how HoYoverse crafts surreal fantasy worlds with captivating art and music. I am inspired by the opportunity to contribute to your mission by developing scalable backend systems that enhance user experiences. While I have not yet worked with Golang, I am confident in my ability to learn it quickly and apply it effectively in the role.

I am available to intern from May to August 2025 and am open to other arrangements as needed. Thank you for considering my application. I look forward to the possibility of contributing to HoYoverse and would welcome the chance to discuss how my skills align with your team's goals.

Best regards,
Tan Jean Yang
